

Are you at Risk? Better check !!

Your letter partner is compliant with security.

Most vendors can talk the talk, but at CompuMail, we walk the walk when it comes to the security of your data. Ask us if we're compliant, and we'll PROVE it!

-  **GLBA**
-  **PCI DSS**
-  **FISMA**
-  **HIPAA / HITECH**

Your partners need more than SAS 70 coverage

A SAS 70 audit enables an independent auditor to issue an OPINION with no pre-determined set of objectives or activities that the service organization must achieve. CompuMail's security measures far EXCEED the opinion of a SAS 70 report.

Your partners are required to:

-  **implement measures to protect unauthorized access to or use of customer information**
-  **properly dispose of customer information**
-  **produce audits, tests, or evaluations conducted by a qualified third party**
-  **monitor all service providers and confirm they have satisfied their obligations**

or better yet

 **COMPUMAIL**

CompuMail understands that our security risk is your security risk.
You can sleep better at night knowing that your data is SECURE.

CompuMail, a leader in the print and mail business, has engaged TechLock, the industry leader in holistic information security assessment, to ensure our compliance with all relevant laws, rules, and regulations. While other companies are engaged in certifications to help them make more money, we're engaged in certifications that make sure you stay in business. A privacy breach in today's world can put you and us out of business. If your current vendor can't provide you this protection, are you really safe?
